Accessibility

Screen reader

Output will vary depending on device, browser, and screenreader combinations:

Scenario Outline: User focus on the checkbox

When I use a screen reader AND focus on a checkbox I hear the following (order will vary)

1. The **label** of the checkbox
2. The **role** ie "checkbox" or "tickbox"
3. The **state** of the checkbox, ie "Ticked", "Not Ticked", "Checked" or "Not Checked"

Scenario Outline: User activates checkbox

When I use a screen reader AND I activate/toggle a checkbox I hear the following

1. The **state** of the checkbox, ie "Ticked", "Not Ticked", "Checked" or "Not Checked

Text resize, text spacing and reflow

- When I increase browser zoom to 200% at a window size to 1280 pixels wide.
- When I increase browser zoom to 400% at a window size to 1280 pixels wide.
- When I modify text spacing to meet the following criteria.

Expected results

- Checkbox remains visible on screen
- All text associated with checkbox is visible and readable, with no content overlapping

No labels
