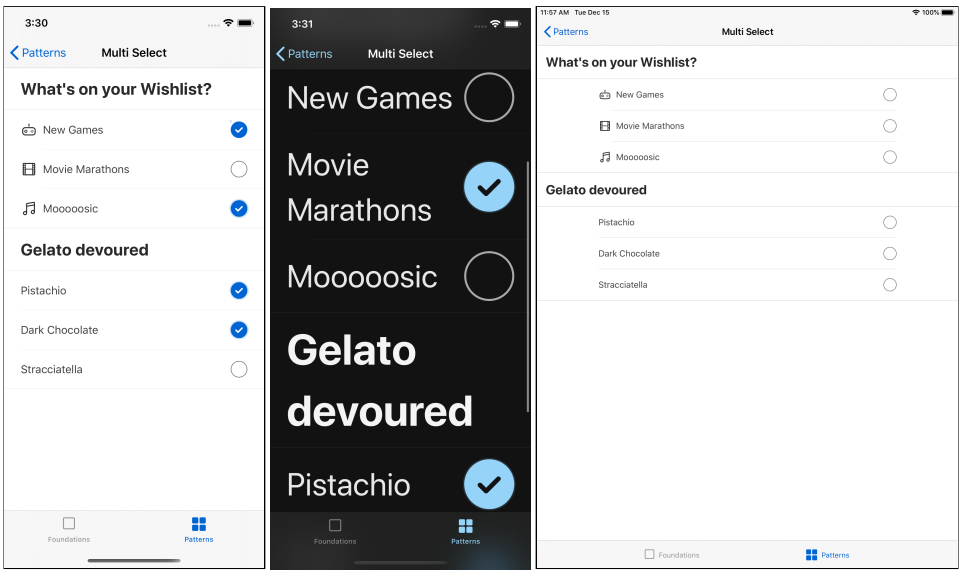
iOS Developer Guide - Multi Select Row

Created by Peggy Liu, last modified on 11 Jan 2021

Used when a user can select more than one option on a list. If users are allowed to select multiple options, use a SingleSelectRow instead.

Find in the catalogue app: Patterns → Multi Select

Light normal mode vs Dark mode with large accessibility Text



Sample implementation in catalogue app

https://git02.ae.sda.corp.telstra.com/projects/ABLE/repos/able-ios-catalogue-app/browse/AbleCatalogue/Application/Application/Pattern/MultiSelect

Quick Code Reference Guide:

Creating a Multi Select Row

```
//initialise:
var multiSelect = MultiSelectRow()

//Set properties
multiSelect.labelText = "pistachio"
//optional Icon on the left hand side
multiSelect.iconImage = UIImage.iconHi()
```

Using a Single Select Row

```
//You can set it's "isSelected" state by using:
multiSelect.isSelected = true

//a variable to keep track of the selected row may be helpful
var selectedIndex: Int = 2

//In the view controller:
//Call setup where needed and define state changed handler:
multiSelect.setup(itemLabelText: "Pistachios", iconImage: UIImage.iconHi()) {  state in
    //perform some action when row is selected e.g. print
    print("Pistachios selection state is now /(state)") //state is true if it is selecte
}

//remember to use the Divider component between your rows. Use DividerSubtle Style between teh rows, and DividerEmphasis
```
