Font Size Scaling Metrics

Created by Tony Wang, last modified by Davyd Geyl on 30 Jan 2020

Version	1

Font Sizes in Different Settings

Android & iOS users have the ability to choose their preferred text size displayed across the OS. This setting can be changed in the OS's Settings app.

It helps users who need larger text for better readability, and it also accommodates those who can read smaller text, allowing more information to be displayed on the screen.

The table below shows the actual size the actual mapping with our current font sizes.

Scaling on iOS

Font Metric is a metric pre-defined by Apple that scales the font size accordingly based on user's text size preferences.

			Font Sizes (px) in Different Device Setting											
			Dynamic Type Sizes							Larger Accessibility Type Sizes				
		Available in Sketch Libraries												
Font Sizes	**Font name**	**Font Metrics used for scaling**	**xS**	**S**	**M**	**Default**	**xL**	**xxL**	**xxxL**	**AX1**	**AX2**	**AX3**	**AX4**	**AX5**
40	emphasis40 minimal40	Large Title	37	38	39	**40**	42	45	47	51	56	60	64	68
32	emphasis32	Title 1	29	30	31	**32**	34	36	39	43	48	54	57	64
24	emphasis24	Title 3	21	22	23	**24**	27	29	31	36	42	49	56	62
20	emphasis20 minimal20	Subhead	16	18	19	**20**	22	24	26	31	36	43	50	58
16	emphasis16 minimal16	Subhead	13	14	15	**16**	18	19	21	25	29	34	40	46
14	essential14	Caption 1	11	11	11	**14**	17	18	20	24	28	34	39	45

Scaling on Android Samsung Devices

		Font Sizes (dp) in Different Device Setting							
Available in Sketch Libraries									
Font Sizes	**Font name**	**0.8**	**0.9**	**1.0**	**1.1**	**1.3**	**1.5**	**1.7**	**2.0**
40	emphasis40 minimal40	32	36	**40**	44	52	60	68	80
32	emphasis32	26	29	**32**	35	42	48	54	64
24	emphasis24	19	22	**24**	26	31	36	41	48
20	emphasis20 minimal20	16	18	**20**	22	26	30	34	40
16	emphasis16 minimal16	13	15	**16**	18	21	24	27	32
14	essential14	11	13	**14**	15	18	21	24	28
