Accessibility

Screen reader

Output will vary depending on device, browser, and screenreader combinations:

Scenario Outline: User focus or toggles radio button

When I use a screen reader AND focus on a radio button I hear the following (order will vary)

1. The **group label** (<legend>), **help text** and **error text** (if present) Depending on the configuration, some screen readers read out the legend either *with every form element*, *once*, or, rarely, *not at all*.
2. The **label** of the radio button
3. The **role** ie "radio button"
4. The **state** of the radio button if selected, ie "Selected" Depending on screen reader, some will also announce "Unselected"
5. The **ordering** of radio button within the group, ie "1 of 3"

Table Group

Text resize, text spacing and reflow

- When I increase browser zoom to 200% at a window size to 1280 pixels wide.
- When I increase browser zoom to 400% at a window size to 1280 pixels wide.
- When I modify text spacing to meet the following criteria.

Expected results

- Checkbox group remains visible on screen
- All text associated with checkbox group is visible and readable, with no content overlapping

No labels
